Dear Mr. Mcauley,

I am responding to your posting for a Junior front end software engineer on the women in tech job board. I was particularly interested in the program in Maui for the STEAM sustainability projects. It definitely highlighted two area that I personally believe are vital to our future. I think that my technical skills match well with this position, and I can tell that your team is made up of engaged and active individuals. I aspire to be part of such a team.

My work background is in customer service and support. Throughout my career, I realized I have an affinity for processes and efficiency and the systems that deliver these experiences. I earned an AAS Degree in Computer Information Systems in 2016. I augmented my degree by attending Epicodus, a 7-month intensive in-person vocational coding program.

I have been working in PHP, Drupal, and, JavaScript for the last several months and have developed various applications including blogs, custom modules, and an e-commerce site. I am familiar with the object oriented languages as well as the MVC paradigm. I have worked in several frameworks such as Angular, Ember, and Symfony. I have demonstrated an ability to learn new languages and technologies quickly.

I am a lifelong learner that will bring my passion for exploration to this position at Treetop Commons. I will also bring the skills I gained in my 10+ years in customer facing roles; chief among these are clear communication skills and the ability to work calmly during a crisis.

I have attached a resume with my qualifications for your consideration as well as a link to my Github page. I look forward to the opportunity to learn more about Treetop Commons.

Sincerely,
Sarah Leahy
